## TYCHEM® 6000 COVERALLS

- A proprietary barrier laminated to a Tyvek® substrate
- Strong and lightweight, with broad chemical barrier
- Used for protection from chemical warfare agents
- Widely used by military first responders for weapons of mass destruction situations
- Taped seams, attached hood (respirator fit), front zipper closure, storm flap, elastic wrists and attached socks
- Colour: Grey
- Available in sizes small to 4X-Large

SAS200

**Applications:** Because Tychem® 6000 garments are only available with respiratory fit hood, storm flap and taped seams, these garments are intended for domestic preparedness situations where the potential for exposure to chemical warfare agents exists. When the hazard assessment consists of potential for exposure to the FBI's Toxic Industrial Chemicals most likely to be used in a terrorist threat, we suggest consideration of Tychem® CPF 3 or higher protection since permeation data is available on a much broader spectrum of chemicals including chemical warfare agents.

**Micro plasma weld**

**Resistance weld**

Micro plasma welds create value. Links are stronger so the gloves wear longer. There is also a lower risk of contamination because, unlike resistance-welded mesh rings, micro plasma welded rings leave no gaps to trap soil.

## POLYMERS

Naturally occurring and man-made polymers are essential building blocks of hand protection. Specific polymers protect workers from specific hazards. There is no ideal glove that works in every situation. Best® utilizes a variety of polymer coatings and fabrics, designed for a variety of tasks.

### NEOPRENE (POLYCHLOROPRENE, CR)

Strong, durable neoprene gloves provide excellent protection from physical hazards such as cuts and abrasions and also provide excellent chemical resistance for protection from exposure to organic and inorganic acids. Neoprene gloves also provide excellent protection from many organic solvents, oils, greases and petrochemicals and resist degradation from ozone, sunlight and oxidation. In addition, neoprene remains functional and flexible at temperatures ranging
from -10° to 300°F (-23° to 150°C).

Neoprene

### NITRILE (ACRYLONITRILE-BUTADIENE RUBBER)

Nitrile, a versatile synthetic copolymer,
is used to make a variety of gloves ranging
from heavy-duty work gloves to ultra-thin medical and clean room gloves. Nitrile coating provides tough protection from physical hazards such as cut, puncture or abrasion. Nitrile-dipped gloves also provide chemical resistance to petrochemicals (especially fuels), oils, greases, pesticides and other agricultural chemicals
while providing excellent dexterity.

Nitrile

### VITON® (FLUOROELASTOMER)

Viton® provides excellent chemical resistance
to fuels used in the aerospace industry.
It provides excellent protection from exposure
to aromatic hydrocarbons such as benzene, toluene or xylene. Viton® gloves are available in unsupported version only. For working with extremely hazardous chemicals such as carcinogenic or highly toxic chemicals, Viton® works where no other glove works.

Viton®

### NATURAL RUBBER

Natural rubber, the most elastic substance known, is found in over two hundred plants including the rubber tree (Hevea Brasiliensis), the source of natural rubber latex used to manufacture gloves.

Natural rubber is a flexible and soft, yet tough and durable coating that provides excellent protection from physical hazards and provides an outstanding grip. Natural rubber provides excellent protection from exposure to aqueous chemicals such as acids and caustics, and limited protection from alcohols and ketones. Natural rubber gloves do not hold up well in organic solvents, oils, greases or fuels such as kerosene or gasoline.

**CAUTION: Natural rubber latex has been shown to cause allergic reactions in sensitised individuals.**

Natural Rubber

### PVC (POLYVINYL CHLORIDE)

PVC is an economical synthetic thermoplastic polymer that is exceptionally durable. PVC gloves provide excellent protection from limited chemical exposure and physical hazard protection. They are noted for being durable and function well in temperatures ranging from -30° up to 212°F (-34° up to 100°C).

PVC

### BUTYL® (BUTYL RUBBER)

Butyl® rubber's tight molecular structure provides excellent chemical resistance to gases and ketones. Butyl® gloves are manufactured in unsupported version only and are used by the military for protection from chemical warfare agents. Butyl® rubber is severely affected by exposure to fuels and aliphatic and aromatic hydrocarbon solvents.

Butyl®

## TYPES OF GLOVES

### DISPOSABLE GLOVES

This category of unsupported gloves is generally characterised as a thin-gauge glove that is not intended for repeated use. They may have a donning agent such as powder or a polyurethane slip coating, or powder-free.

### LAMINATED GLOVES

This special nitrile-coated fabric is made by transfer-coating the nitrile polymer onto a textured surface and then laminating the nitrile film onto Sanitized® poly-cotton fabric for superior comfort and flexibility.

### IMPREGNATED GLOVES

This special nitrile or PVC-coated fabric is made by knife-coating nitrile or PVC directly onto Sanitized® cotton fabric.

### SUPPORTED GLOVES

These gloves offer a polymer coating over a cotton, nylon or aramid liner. The textile substrate imparts adds strength and resistance to abrasion, cuts and punctures.

### UNSUPPORTED GLOVES

These are polymer gloves with no textile lining. These gloves include heavyweight, medium weight or disposable gloves. They may be chlorinated or have a cotton flock lining for easier donning.

### CUT RESISTANT GLOVES

This special category is characterized by the utility of the gloves and includes either polymer-coated gloves or special high performance yarns that are designed to impart cut-resistance or combinations of these.

# CAN/CSA Z195 PROTECTIVE FOOTWEAR

This National Standard of Canada deals with protective footwear and includes requirements for resistance against toe impact, sole puncture, electric shock, chainsaws, as well as requirements for static discharge and electrical conductivity. Footwear that has been certified by CSA International to the CAN/CSA Z195-02 standard is eligible to bear our Protective Footwear Certification Markings.

**CSA CERTIFICATION MARK FOR CANADA** Indicates footwear is CSA-certified to Canadian national requirements

**LABEL**

PROTECTIVE FOOTWEAR
CHAUSSURES DE PROTECTION
######

**DESCRIPTION**

This serialized label indicates certification by CSA International and is only available through CSA.

**LOCATION**

This label will be side-stitched or heat-sealed inside the top of the tongue or inside the quarter lining of the right shoe.

## CLASSES OF PROTECTION One or more of these markings will appear on the outer side or the tongue of the right shoe

| PROTECTION MARKINGS | SAFETY FEATURES | RECOMMENDED USE |
|---|---|---|
| | **Green triangle** indicates sole puncture protection with a Grade 1 protective toe to withstand impacts up to 125 Joules. Comparable to a 22.7 kg (50 lb) weight dropped from 0.6 m. Sole puncture protection is designed to withstand a force of not less that 1200 Newtons (270 lbs) and resist cracking after being subjected to 1.5 million flexes. | For any industry, especially construction and heavy work environments, where sharp objects, such as nails are present. |
| | **Yellow triangle** indicates sole puncture protection with a Grade 2 protective toe to withstand impacts up to 90 Joules. Comparable to a 22.7 kg (50 lb) weight dropped from 0.4 m. Sole puncture protection is designed to withstand a force of not less that 1200 Newtons (270 lbs) and resist cracking after being subjected to 1.5 million flexes. | For light industrial work environments requiring puncture protection as well as toe protection. |
| | **Blue rectangle** indicates Grade 1 protective toe without sole puncture protection. Grade 1 protective toe withstands impacts up to 125 Joules. Comparable to a 22.7 kg (50 lb) weight dropped from 0.6 m. | For industrial work environments not requiring puncture protection. |
| | **Grey rectangle** indicates Grade 2 protective toe without sole puncture protection. Grade 2 protective toe withstands impacts up to 90 Joules. Comparable to a 22.7 kg (50 lb) weight dropped from 0.4 m. | For institutional and non-industrial work environments not requiring puncture protection. |
| | **White label with green fir tree symbol** indicates chainsaw protective footwear. Protective features are designed into the boots to prevent a running chainsaw from cutting all the way through the boot uppers so as to protect the shins, ankles, feet and toes. | For forestry workers and others exposed to hand-held chain saws or other cutting tools. |
| | **White rectangle with orange Greek letter omega** indicates soles that provide resistance to electric shock. Such certified footwear contains a sole and heel design assembly that, at the point of manufacturing, has electrical insulating properties intended to withstand 18 000 Volts and a leakage current not exceeding 1 mA. | For any industry where accidental contact with live electrical conductors can occur. Warning: Electrical Shock Resistance deteriorates with wear and in wet environments. |
| SD | **Yellow rectangle with green "SD" and grounding symbol** indicates soles are static-dissipative. The outer soles are made from an antistatic compound, chemically bound into the bottom components, capable of dissipating an electrostatic charge in a controlled manner. The test criteria are 106 to 108 Ohms. Note that SD footwear without toe protection will not have sole protection certified by CSA. | For any industry where a static discharge can create a hazard for workers or equipment. |
| C | **Red rectangle with black "C" and grounding** symbol indicates soles are electrically conductive. The outer soles are made from a conductive compound that is permanently bound to the bottom components to provide electrical grounding of each foot. Test criteria are 0 to 500 000 Ohms. | For any industry where static discharge may create a hazard of explosion. |

### MARKING

The right foot of each pair bears the following information permanently marked in a conspicuous location:
A) Manufacturer's name, trade name, or CSA Master Contract number
B) Date of manufacture by month and year or by date code
C) Outsole construction style or name

### METATARSAL PROTECTION

Metatarsal Protection is intended to safeguard the upper foot (metatarsal bones) and toe areas. To meet CSA design requirements the footwear must provide sufficient width and height to cover the dorsum of the foot. Note that there is no CSA certification for metatarsal protection as the standard does not currently contain performance requirements.

## CLASSES OF FIRE:

Fires are classified according to the material that is burning. Fire extinguishers are rated by the area each will cover for a particular class of fire. The higher the number, the bigger the fire area you can fight.

**Note: Maintenance and recharging of all fire extinguishers should be performed by a qualified service company.**

**CLASS A** fires are the most common. They involve ordinary combustibles such as wood, paper, cloth, rubber, a number of plastics, and other ordinary materials.

**CLASS B** fires are caused by gasoline, grease, oil, paint and other flammable liquids. Commonly strikes in warehouses and manufacturing plants.

**CLASS C** for live electrical equipment. Often occurs in computers, monitors, wiring and appliances.

**WATER TEMPERING PRODUCTS** are designed to meet ANSI standard Z358.1 requirements to deliver "tepid" water to injured workers. In addition to discouraging use of a safety flushing device, a 15-minute deluge of cold water to the injured worker can negatively affect core body temperature, and hypothermia can result. Therefore, ANSI standard Z358.1 requires emergency showers and eyewashes to deliver "tepid" water. ANSI defines "tepid" water as 15.6°C to 38°C (60-100°F). Tempering solutions include steam, instantaneous (on demand) heaters and thermostatic mixing valves (TMV's). TMV's blend hot and cold water to meet strictly specified water temperature ranges.

## EMERGENCY FIXTURE TANKLESS WATER HEATERS

- Performs when needed and quickly provide an unlimited supply of warm water
- Reaches the ANSI standard Z358.1 requirements for tepid water temperatures in as little as 20 to 30 seconds
- Patented temperature control system and multiple safety features like internal fusing, digital temperature control, Incoloy 800 sheathed heating elements to eliminate the "tingle" effect, and an externally mounted emergency stop button
- Precision engineered for optimal performance
- Features rugged industrial components from high quality copper and brass tested to 300 PSI, to increase the life of your heater
- Large internal passageways engineered into every heater minimize pressure drop, so there will be no large temperature swings; if the water flow changes drastically, you will not have to be concerned with scalding
- Easy to install anywhere – all you need is access to one electrical connection and a cold water line
- Splash proof NEMA 4 enclosures are constructed for either indoor or outdoor use
- These energy efficient heaters perform on demand and only require water and power once activated
- No mixing valves required

**PORTABLE EYEWASHES** provide self-contained fluid where plumbed water is not available. Gravity-fed or pressurized portable eyewash systems should deliver the ANSI minimum 15-minute safety eyewash drench. To keep water stored in these portable systems safe for ophthalmic use, an antibacterial agent is included or available separately. These units often can be freeze protected for outdoor applications. Portable eyewash stations installed in temperatures below 16°C will need to be of a tempering design to maintain compliance with ANSI standard Z358.1

## COMBINATION PADLOCKS

Master Lock has reinvented the combination padlock with our new Blockguard™ technology. This patent-pending "Anti-Shim" technology deters shimming a padlock - shimming is a method of violating a lock by inserting a specially designed tool into its latch mechanism. Blockguard™ has unique flat latch technology that blocks typical shimming tools from opening the locks and thus deterring break-ins.

- These combination padlocks feature the new Blockguard™ anti-shim technology
- Double-reinforced stainless steel case with cold-rolled steel construction shields locking mechanism from physical attack
- Hardened steel shackles resists cutting and prying
- 40 number, 3-number dialing provides thousands of possible combinations available
- Dial automatically locks under shackle tension to prevent "feeling out" the combination and automatically scrambles when closed to prevent accidental opening
- Fits lockers with a padlock eye of at least 5/16" (8 mm) in diameter

- Top has 3/8" plain hole

### RP-PLASTIC TAGS & HS-LAMINATE TAGS

Durable tag withstands pulls and tears in dirt and grease environments.

Plastic tags are water-resistant – to withstand weather conditions.

The rigid plastic is flexible, yet will not readily break down over a wide temperature range. Good for indoors and outdoors use. Writable surface is abrasion resistant.

- 15-mil rigid plastic material
- Flexible, yet durable – withstands stretching and ripping
- Top has 3/8" hole reinforced with metal grommet to prevent pull off

### HS-LAMINATE TAGS

# ACCIDENT PREVENTION SIGNS

The Occupational Safety and Health Administration (OSHA 29 CFR§ 1910.145) provides specifications, design, application and use of header signs. These signs are intended to indicate potential, type and degree of the hazard that may lead to accidental injury or property damage. They define specific hazards by conveying a clear and rapidly understood message.

## ACCIDENT PREVENTION HEADERS

**DANGER** — Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations. The signal word Danger should not be used for property damage hazards unless personal injury risk appropriate to the level is also involved.

**WARNING** — Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. This signal word should not be used for property damage hazards unless personal injury risk appropriate to this level is also involved.

**CAUTION** — Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices that may cause property damage.

**NOTICE** — Indicates a statement of company policy directly or indirectly related to the safety of personnel or protection of property. This signal word should not be associated directly with a hazard or hazardous situation.

**SAFETY FIRST, THINK, EMERGENCY** — Indicates general instructions relative to safe work practices, reminds of proper safety procedures and indicates the location of safety equipment.

## ACCIDENT PREVENTION SIGN CONTENTS

**Header**
A specific or "signal" word (or words) to designate a degree or level of safety alerting, always located in the uppermost portion of the sign. Intended to capture and direct attention to the potential hazardous situation.

**Legend**
The specific short message conveys the need to pay attention to a potential hazard or hazards, or take a necessary action to avoid such hazard(s).

Many signs consist of just header and legend — Signs can also contain a symbol...

**Symbol**
Pictorials are graphic representations to clearly convey a specific alerting message compatible with and supplemental to the legend message. Universal in design, many are standardized to be easily understood.

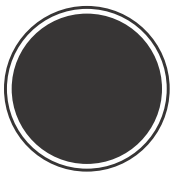
# CANADIAN STANDARDS ASSOCIATION IDENTIFICATION SAFETY SIGNS

Communicate regulatory, warning, or informational messages in a symbol to employees and visitors in the workplace. Use Canadian Standards Association (CSA) Z321 symbols designed to be easily understood for specific safety and/or health hazards. Symbols are divided into three classifications with each containing two sub-groups - for a combination of six colours and three shapes.

**1. REGULATORY**

**1.1 PROHIBITION**
Forbids an Action
(red and black on white)



**1.2 MANDATORY**
Requires/Obligatory Action
(white on black)

**2. WARNING**

**2.1 CAUTION**
Potential Hazard
(black on yellow)

**2.2 DANGER**
Definite Hazard
(white on red)

**3. INFORMATION**

**3.1 EMERGENCY**
First Aid, Health, Fire Protection, Fire Fighting, and Emergency Equipment
(white on green)

**3.2 GENERAL INFORMATION**
Permission or Public Information
(white on blue)

## CSA SIGNS

Safety Signs meet the Canadian Standards Association (CSA) Z321 standard for Signs and Symbols for the Workplace. Signs contain symbol with text to provide flexibility in conveying the sign message. The safety symbol is contained in a geometric shape with accompanying colours. These are uniform designs for an easily understood sign. The particular shape and colour combination distinguish the type of safety classification category. These attention-getting signs communicate the text safety information message. Signs measure 355 mm x 254 mm (14" x 10").

## PIPE MARKERS – WHAT YOU NEED TO KNOW

ACCUFORM

The proper marking of contents and flow direction in pipes and piping systems is a vital component of a thorough safety and identification program.

ASME A13.1 – 2007 scheme for the identification of piping systems... A uniform system for the identification of piping contents has been established to warn personnel when the piping contents are inherently hazardous... This standard has been prepared to specify the identification of the contents of piping systems on the basis of legends, it also suggests the use of colour as a supplementary means of identifying the type of hazard of the material contained in the system.

Pipe markers are designed to meet or exceed ASME (ANSI) A13.1-2007 recommendations for size, colour and visibility.

Pipe markers are quick visual cues, providing immediate identification information of pipe contents for emergency responders and workers to safely carry out their responsibilities when working in and around piping systems.

The legend or wording on the pipe marker is to be the primary means of naming the contents of the pipe. The name is to be brief, yet complete or in understood abbreviated format. Arrows are to accompany the legend to indicate the directional flow of the contents. Additional information may be necessary to identify the content details such as pressure and temperature.

**Installation recommendations:**

- Above or below centre visual line of pipe
- Frequent intervals on straight pipe runs (visible from any point along the length)
- Close to valves
- Near branches and T's in piping
- Any change in direction of piping
- Near points before and after pipe going through walls, ceilings, and floors

OSHA 29 CFR 1910.253 Oxygen-fuel gas welding and cutting (d)(4)(ii) Aboveground piping systems shall be marked in accordance with the American National Standard Scheme for the identification of piping systems, ANSI A13.1

1910.261 Pulp, paper, and paperboard mills (a)(3) General incorporation of standards. Establishments subject to this section shall comply with the following standards:

1910.261(a)(3)(ii) Scheme for the identification of piping systems, A13.1

1910.262 Textiles

1910.262(c)(7) Identification of piping systems. Identification of piping systems shall conform to American National Standard A13.1

## LETTER HEIGHT & PIPE MARKER SIZES

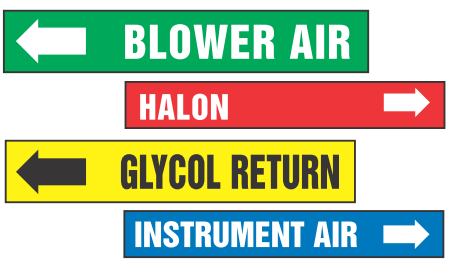
The outside diameter of the pipe determines the letter height and background field length of the marker.

| Outside Diameter of Pipe" | Length of Pipe Marker Colour Field" | Size of Letters" |
|---|---|---|
| 3/4 to 1 1/4 | 8 | 1/2 |
| 1 1/2 to 2 | 8 | 3/4 |
| 2 1/2 to 6 | 12 | 1 1/4 |
| 8 to 10 | 24 | 2 1/2 |
| Over 10* | 32 | 3 1/2 |

*Available as custom pipe markers

## LEGEND

The legend on the marker gives the name of the contents in full or abbreviated form. Arrows should be used to indicate direction of flow.



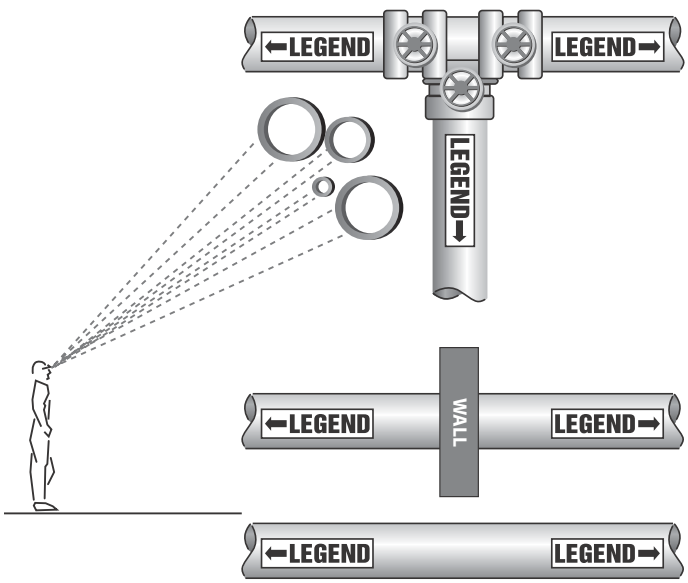
## COLOURS

Colours identify the characteristic hazards of the contents of the piping system.

| Contents of the Pipe | Colour |
|---|---|
| Fire Quenching Fluids | WHITE ON RED |
| Toxic And Corrosive Fluids | BLACK ON ORANGE |
| Flammable Fluids | BLACK ON YELLOW |
| Combustible Fluids | WHITE ON BROWN |
| Potable, Cooling, Boiler Feed, And Other Water | WHITE ON GREEN |
| Compressed Air | WHITE ON BLUE |

## VISIBILITY & LOCATION

Where pipe lines are located high or low, place the lettering below or above the horizontal centerline of the pipe. Affix markers onto piping close to valves or flanges and adjacent to changes in direction, branches, and where pipes pass through walls or floors; and at 25' to 50' intervals on long straight pipe runs.



Pipes installed at a distance may make pipe markers difficult to read (refer to the distance reading chart). We can provide larger, legible pipe markers to meet your requirements. Please contact us for solutions.

# CGSP PIPE MARKERS

**MARK PIPES TO IDENTIFY AND LABEL HAZARDOUS AND NON-HAZARDOUS SUBSTANCES CONTAINED IN PIPING SYSTEMS BY USING COLOUR, LEGEND, AND PICTOGRAM.**

Create pipe markers based on the Canadian General Standard Board CAN/CGSB-24.3-92

The combination of text with Workplace Hazard Materials Information System (WHMIS) symbols provides an impact and quick understanding of the pipe contents.

Comply with the guidelines in marking pipes by providing workers and emergency personnel the ability to easily identify contents of pipes in the event the contents could release into the environment.

When WHMIS controlled substances are contained in piping systems, the appropriate WHMIS symbol(s) are to be included on the pipe marker with the legend.

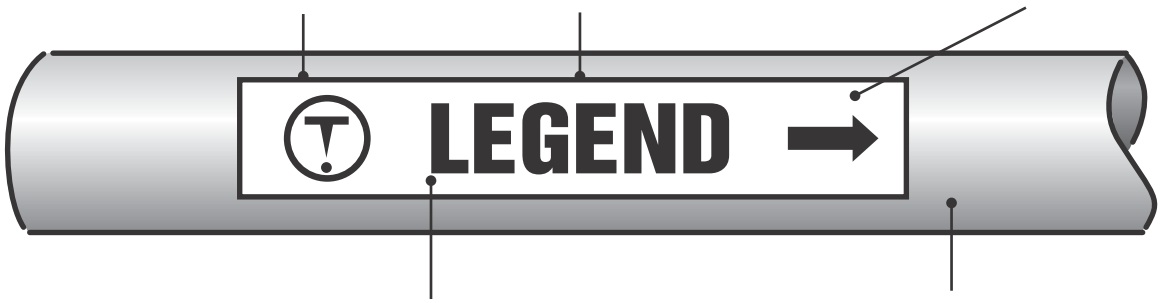
**WHMIS SYMBOLS:**

## HOW TO ORDER:

### 1. SPECIFY WHMIS HAZARD SYMBOL(S) – IF NECESSARY.

### 2. SPECIFY LEGEND OF PIPE CONTENT.

### 3. SPECIFY DIRECTIONAL ARROW – IF NECESSARY.



### 4. POINT OUT COLOUR COMBINATION.

| Contents of the Pipe | Colour |
|---|---|
| Hazardous | BLACK ON YELLOW |
| Low Hazard Material | WHITE ON GREEN |
| Low Hazard Gas | WHITE ON BLUE |
| Fire Protection | WHITE ON RED |

### 5. CHOOSE SIZE BASED ON PIPE SIZE.

## THE GLOBALLY HARMONIZED SYSTEM (GHS)

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS) is an international system established by the United Nations to replace pre-existing classification and labeling methods. GHS presents a unified code to eliminate discrepancies in labeling conventions from one country to another. Using a harmonized standard reduces the chance of misinterpretation or confusion, thereby increasing safety regardless of the language spoken or even the level of literacy of those working with the substances.
It covers the following:

- Classification of physical health and environmental hazards
- Labeling environments
- Universal symbols and pictograms
- Hazard warning statements, aspiration hazards
- Signal word for type of hazard
- Safety data sheet format

The risk of chemical exposure lurks at any stage; be it production, transport, handling or use. Incomplete or ambiguous data can be not only dangerous but have a negative impact on productivity. As such, GHS is designed to protect the environment as well as workers, consumers, transport workers, and emergency responders.

One of the other aims of GHS is to improve and expand international knowledge of the chronic health hazards of chemicals and thereby reduce, eliminate and/or replace these chemicals. Due to the complex nature of this domain, the GHS is constantly being modified and revised. Effective date is proposed to be two years after publication of final rule passage by Congress. For this reason, it's important to contact one of our experts to stay abreast of the latest GHS developments and how they affect you.

## WHMIS REQUIREMENTS

The Workplace Hazardous Material Information System (WHMIS) is enforced nationwide. It was developed as a way of protecting workers from the adverse effects of hazardous materials in the workplace. WHMIS gives both the employers and employees the right to know about hazards associated with chemicals they work with.
This is accomplished through the use of Material Safety Data Sheets (MSDS), proper labelling and training.

**Material Safety Data Sheets must:**

1. Accompany every shipment of hazardous material.
2. Be kept on file and be accessible to all employees.
3. Be updated and revised every 3 years.

**Must contain the following information (as a minimum):**

- Hazardous ingredients
- Preparation information
- Product information
- Physical data
- Fire or explosion data
- Reactivity data
- Toxicological properties
- Preventative measure
- First aid measures

**Supplier label must:**

1. Be supplied by the manufacturer of the chemical.
2. Be applied to every container of hazardous material.
3. Have the distinct Hash border.

**Must contain a total of 7 pieces of information:**

- Product identifier
- Supplier identifier
- Hazard symbol
- Risk phrase
- Precautionary measures
- First Aid measures
- Reference to MSDS

**Workplace labels are required:**

1. When the supplier label has been damaged or fallen off.
2. When transferring chemical from the original container to a smaller one.
3. To contain at least 3 pieces of information:

- Product identifier
- Precautionary measure
- Reference to MSDS

**Training is an important part of WHMIS. Training must cover such things as:**

- How to read and understand labels and MSDS
- Procedures for safe use, storage, handling and disposal of hazardous material
- Procedures to be followed in case of emergency

Every employee who comes in contact with hazardous material must be trained

## WHMIS AFTER GHS

The original WHMIS is not being replaced but rather updated to align as closely as possible with the United States and other key trading partners.
The new WHMIS will be called "WHMIS 2015".

When ordering labels, please provide us the following information from the Safety Data Sheet (SDS) for required label elements:

English French

**Supplier label must include the following:**

**Product identifier** – the brand name, chemical name, common name, generic name or trade name of the hazardous product.

**Initial supplier identifier** – the name, address and telephone number of either the Canadian manufacturer or the Canadian importer*.

**Pictogram(s)** – hazard symbol within a red "square set on one of its points".

**Signal word** – a word used to alert the reader to a potential hazard and to indicate the severity of the hazard.

## CHOOSING THE RIGHT MAT

**There are three types of matting to consider. To select the right type for you, we recommend following these steps:**

1. Identify the type of area where you wish to install the carpet, taking into account the amount of traffic it will experience. (ex: heavy traffic vs. light traffic)
2. Refer to the collection of products in the following pages and locate the right fit for you. We've categorized each mat to correspond to one of the four traffic categories, colour coded for your convenience
3. Choose a scraper, a wiper/scraper and a wiper mat. Note: for best results, use three types of mats in the following combination (ex: Upfront Scraper, Super Soaker and Proluxe)

### 1-SCRAPER

- Exterior usage or between two doors
- Aggressive scraper surface, which will capture the majority of dirt from the soles of shoes
- Does not absorb moisture, which facilitates maintenance

### 2-WIPER/SCRAPER

- Interior usage or between two doors
- Irregular surface which enables trapping moderate dirt that was not captured at the scraper level
- Moderately retains water and moisture that may later evaporate or be extracted at a later time

### 3-WIPER

- Interior usage
- Plays a major role in the retention of water and fine dust
- Minimizes the risk of slipping and falling

## BRISTLE DISCS

Bristle discs are ideal for safely cleaning and stripping a wide variety of substances off of metal. The discs will easily cut through hardened enamel, paint, thick dried adhesives, and layers of corrosion, without destroying the underlying material or compromising safety with dangerous flying wires.

In addition, bristle discs do not clog up with substances being removed, and give consistent finishes throughout the life of the discs.

All bristle discs are colour coded by grade and are made of nylon embedded with abrasive to create an abrasive action. Each disc is flexible and easily conforms to contours and tight corners and angles.

### ROLOC™ BRISTLE DISCS

- Uniform concentration of mineral throughout the flexible abrasive filled bristles
- Fast cut rate and long performance life for removal of rust, coatings, and flashing
- Roloc™ attachment method for quick and easy disc changes
- All discs feature a 5/8" trim length and are embedded with Regalite™ abrasive mineral

## END BRUSHES

Especially suited for use on portable air and electric tools, CNC and robotic equipment, the end brush is designed for work where space limitations are a factor. In most applications, higher speeds (up to 25 000 RPM) are required for effective brushing action. Osborn® end brush fill materials include carbon and stainless steels, brass, natural fibre, abrasive nylon, and TY® elastomer encapsulated wire.

## OD - OUTSIDE DIAMETER

Standard Osborn® end brushes are made with outside diameters from 3/16" through 3". For larger surfaces or "surround" applications, multiple brushes may be clustered. As a guide, add 1/8" to brush O.D. to get overall O.D.

## T - TRIM LENGTH

Shorter brush section provides stiffness and faster cutting. Longer filaments have more flexibility for irregular surfaces.

## OAL - OVERALL LENGTH

Distance from end of brush part to end of shank.

## S - SHANK DIAMETER

All standard end brushes have 1/4" diameter shank. Miniature end brushes have 1/8" diameter shank.

## CRIMPED WIRE END BRUSHES

- Engineered to operate at high speeds
- **Applications:** Rubber and Plastic Mold Cleaning/ Cleaning Pipe I.D./Removing Rust, Weld Scale and Spatter/Cleaning Castings/Burr Removal/Rubber Flash Removal/Carbon Removal/Spot Facing/ Cleaning and Finishing Recessed Areas

## AH - ARBOR HOLE

Osborn® brushes are made with a variety of standard sizes which can easily be adapted to fit any standard spindle.

## OD - OUTSIDE DIAMETER

Standard Osborn® wheel brushes are made with outside diameters from about one inch to almost two feet. Generally, the largest diameter that suits your work space and machine speed will be most efficient.

## ID - INSIDE DIAMETER

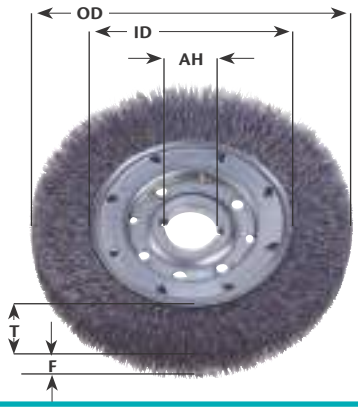
Assuming a fixed O.D., increasing the I.D. produces a stiffer, less flexible brush.

## T - TRIM LENGTH

Shorter trim makes a stiff, fast cutting brush. Longer trim makes a more flexible brush for irregular surfaces.

## F - FACE WIDTH

Standard face widths range from extremely narrow to several inches wide. Many styles can be mounted in multiple.



# CRIMPED WIRE WHEEL BRUSHES

- Can be mounted horizontally or vertically
- Highly flexible, ideal for light to medium duty surface preparation on irregular surface
- Offered a variety of style from aggressive material removal to surface conditioning and polishing

## AH - ARBOR HOLE

Most cup brushes are available with either plain or 5/8-11NC threaded arbor holes, while a few styles feature a hexagonal opening, and smaller sizes are fitted with a 1/4" shank.

## OD - OUTSIDE DIAMETER

Standard Osborn® cup brushes are made in a range of outside diameters from 2" to 9". Generally, the largest diameter that suits your work space and machine speed will be most efficient.

## T - TRIM LENGTH

The length of the fill material that extends beyond the metal cup or bridle. A short trim length provides a stiff, fast-cutting brush, while a longer trim length offers flexibility for dressing irregular surfaces.

## R - ROW COUNT & ALIGNMENT

Cup brushes are available with one, two, or three rows of filaments or knots. Unless otherwise identified as "Stagger Row," multiple rows are parallel. Stagger row brushes provide more aggressive action.

## CRIMPED WIRE CUP BRUSHES

Designed for light and medium-duty applications on a variety of high speed air and electric tools. Offers smooth, responsive cutting action at all speeds on a variety of jobs.

CLARKSON OSBORN

### WARWICK NPT (NATIONAL PIPE THREAD) TAPS

**Applications:**

For tapping tapered pipe threads. This is the most common of all pipe tap styles. The tapered thread form creates a pressure-tight joint when used with a sealant.

### WARWICK NPTI (INTERRUPTED NATIONAL PIPE THREAD) TAPS

**Application:**

HSS interrupted thread pipe taps are designed for tapping soft or tough stringy metals that tend to load threads with chips. Interrupted thread pipe taps start with a few full threads and then have every other thread removed along the thread helix to provide more chip space, better lubrication, and to reduce drag.

### WARWICK NPTF (DRYSEAL NATIONAL PIPE THREAD) TAPS

HSS taper pipe taps are designed for tapping ferrous and non-ferrous fittings used to connect pipes carrying fluids or gases and other places where very tight fits are needed. NPTF taper thread pipe taps do not require sealants. Dryseal is attained by metal to metal contact.

### WARWICK NPTS (STRAIGHT NATIONAL PIPE THREAD) TAPS

**Application:**

HSS straight thread pipe taps (NPTS) are designed for tapping holes or couplings for low pressure work that will adjust at assembly to the taper of external threads. A sealant must be used to secure a pressure-tight joint.

## SMARTWASHER®

SMARTWASHER uses the process of **bioremediation** - the accelerated break down of organic compounds such as grease, grime, varnish, oil, carbon and other heavy industrial soils through the use of nonpathogenic microbes. The microbes, suspended in a fluid that re-circulates through the unit, literally **eat their way through soils**, converting them into harmless water and carbon dioxide ($CO_2$). The solution remains clean and usable, unlike traditional solvent-based systems where the solution becomes dirty and less effective over time. Disposal becomes a non-issue, as hazardous waste streams are eliminated.

## VENT PLUGS

Oil-Rite CORPORATION

**Vent plugs with filters** can be used to relieve pressure or vacuum. These vent plugs assure pressure equalization and minimize undesirable problems, such as excessive pressure. The vent plugs allow air to freely communicate through a 40 micron filter. Steel plated body. Maximum temperature: 225°F.

**Vent plugs with deflectors** can also serve as filler plugs. They are equipped with a splash deflector which prevents the liquid from spilling into the vent hole and outside. To allow air to communicate freely with the outside, no screens or filters are used which might make the units inoperative.

## AIR OPERATED SPRAY DISPENSERS

- **Pressure**: 30 PSI maximum
- **Temperature**: 160°F maximum
- **Air capacity**: 5 CFM @ 20 PSI
- **Liquid capacity**: 3 GPH @ 10 PSI
- **Components**: External mounted
- **Maximum spray valves**: Four
- **Reservoir**: Clear acrylic
- **Seals**: Buna-N
- **Covers**: Aluminum alloy

- Air operated spray dispensers feed liquid to elevated, distant, or inaccessible points
- The amount of liquid sprayed is infinitely adjustable from a fine spray, invisible to the eye, to a coarse spray by adjusting the air pressure of the needle valve on the spray nozzle
- Any liquid that flows can usually be sprayed, up to 1000 SSU viscosity at 100°F
- For best performance, a second regulator with suitable air capacity is supplied to adjust the air pressure to spray valves
- Operation can be made automatic with two solenoid valves which can be activated by a motor drive or with a timer, allowing the valves to continually or momentarily apply a film of liquid

(1) Cyanoacrylates have very good moisture resitance on plastics
(2) Uncured liquid adhesives may cause stress cracking of certain thermoplastics, e.g., polycarbonate, acrylic and polysulfone.
(3) Elevated temperatures are required to dispense liquid Hot Melt Adhesives.
(4) Urethane Hot Melts require 24 hours for full cure.

**PLEASE NOTE:** This chart should not be used to specify products without specific testing.
It is recommended that you conduct on-part testing to ensure product performance before specifying any adhesive.
