# PIPE FITTINGS

There are many variations of fittings to suit a wide range of applications, providing the versatility to achieve any structural configuration. Kee Klamp® fittings are galvanized malleable iron castings designed to suit eight sizes of tube.

A standard hex key and tube cutters are the only tools required to create strong, rigid structures.

Recessed set screws, tightened by the hex key, firmly lock the tube into the fitting.
The set screw is manufactured in case hardened steel and is coated to protect against corrosion.

**KEE KLAMP®**

- Simple method of constructing tubular structures
- Cost effective alternative to welding
- Galvanized to resist corrosion

K CUSTOM KLETON

## WIRE MESH PARTITION COMPONENTS

**Everything necessary to create your own custom enclosure. Fast and easy assembly, multiple sizes available. Please follow these guidelines for determining the components required.**

## 1. UNIVERSAL POSTS

A post must be placed at each end of every panel (or of every stack of panels). Be sure to calculate an extra 2" of overall wall length for each post added. When a post meets an existing wall, add one **KD115** wall bracket for proper support (fasteners are included with **KD115** to mount to post, not to wall).

**Universal Posts**

| Blue Model No. | Yellow Model No. | Height | Wt. lbs. | Price /Each |
|---|---|---|---|---|
| KD053 | KH860 | 8' 3" | 22 | |
| KD046 | KH922 | 10' 3" | 27 | |
| KD050 | KH923 | 12' 3" | 32 | |

**Safety Yellow**

## 2. PANELS

Whenever possible, stacking panels horizontally (one above the other) is more economical than placing them vertically (next to each other) - this is because fewer posts are required for wall support when panels are stacked.

**Examples:**

- For an 8' high partition, stack two **KD037** (8' x 4') panels horizontally
- For a 10' high partition, stack two **KD037** (8' x 4') and one **KD033** (8' x 2') panel horizontally
- For a 12' high partition, stack three **KD037** (8' x 4') panels horizontally

| KD037 | KD131 | 8 | x | 4 | 45 | |

## 3. ADJUSTABLE FILLER PANELS

Adjustable filler panels fill in blank spots on the ends of wire mesh partitions to plug up potential security risks. Filler panels come in two sizes: 1' x 4' and 1' x 8' that slide over the ends of existing wire mesh sections. Bolt holes on the filler panels are separated per every inch and allow the filler panel to fill in a space between 6" and 10" wide. The holes line up with holes on the existing panel which are drilled in at the top and bottom to securely fasten the filler panel in two places.

- Curtain partitions screen, isolate, enclose and protect any area of any size
- Commonly used in welding and paint shops, but can be used anywhere
- Brackets made of 16-gauge steel and designed for wall or ceiling mount but can be self supported by floor stands
- Large selection of drape material can be utilized with any curtain

## DESIGN YOUR OWN CURTAIN

**Curtains** - Take exact length of area of enclosure and add 10% fullness for proper draping. Then multiply length and height to obtain square footage. Curtains hemmed on top and two sides 2" pocket on bottom side. Brass grommets spaced every 12". Refer to model number for square footage cost of fabric required.

**Track** - Straight and curved. Straight track available in 5' and 10' lengths. Curved corners are 3' long with 2' radius welded splicer on each end included. When using a curved track, length is increased by 2', e.g. 8' straight track with a curve at each end overall = 12'.

**Carriers** - Since curtains are made to any length be sure to add one additional carrier to actual length of curtain ordered. For example every 10' of curtain is fabricated with 11 grommets on top side. Therefore 11 carriers are required. A double carrier should be used at the beginning of each curtain. Steel roller carriers are permanently lubricated enclosed bearings.

**Clamps** - Available for flush ceiling/beam mounting and floor mounting. Clamps can also be used as track splicers. All fasten with supplied Allen bolts. Order sufficient clamps to support track every 5'.

**Standards** - When free standing uprights are required, be sure to specify clamps for fastening track on posts **KB032** (Posts are required every 8'). Other custom heights on application.

**Note:** All posts should be lagged or welded to floor as required.

### FIXED MOUNTING SYSTEM

| Model No. | Description | Price/Each |
|---|---|---|
| KF001 | Complete 4' aluminum angle mount | |

# CUSTOM STRIP DOORS

In some applications strip curtain door kits can not be used. However, custom doors can be designed to fit your application. Generally strip curtain material is available in 8" and 12" standard and low temperature versions. Commonly used mounting hardware includes universal mount aluminum angle, straight roller track and hinged roller track. For special applications the "ordering information" provided will help you determine the type of system you will require. Our customer service representatives are also available, should you require any assistance. Please call for special pricing whenever square footage is required.

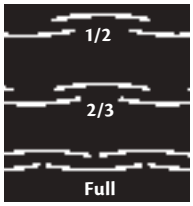
### ORDERING INFORMATION

1) Determine the type of mounting system required: angle mount or sliding door. Other custom doors can be designed.
2) Choose overlapping requirement based on the location and type of traffic involved.
3) Measure door opening giving proper allowances for the type of mounting system.
4) Calculate approximate amount of square feet required.

### OVERLAPPING METHODS

Overlapping with Kleton custom doors offers three basic overlap methods. With holes on 1" centres, almost any overlap is possible. Our standard doors under 6' x 8' use 1/2 overlap. Doors over 8' x 8' use 2/3 overlap.

1/2, 2/3 overlap are the most common and are recommended for moderate temperature differential and personnel equipment passage. Full overlap is recommended for large temperature differentials and light winds, also ideal for noise control and doors in excess of 12' high.



### FIXED MOUNTING SYSTEM

Universal aluminum angle mount can be used for both wall or lintel mount applications. Measure door opening, for wall mount add 6", lintel mounts use exact dimension. Angle comes in 4' sections, please indicate if a solid one length angle is required. All hardware included.

**Model No. KF001** Aluminum Angle Per 4 ft. Complete

### SLIDING STEEL DOOR MOUNT

Strips are attached to a trolley assembly. The mechanism enables removal of strip material from door opening. Allowing unobstructed traffic movement. The "curtain-like" structure can be parted on either side or in the middle. Allow sufficient wall space on either side of door as needed. Track available in 5' or 10' lengths, cut lengths available. Trolley assembly available in 2' and 3' length with steel wheels, all trolleys interconnect. Also available in hinged roller track for curved door systems.

## FORK TILT LEVEL INDICATORS

An incorrect tilt angle of a lift truck's forks is the leading cause of damage to pallets, racking and merchandise. Even the most experienced operators have difficulty judging the correct fork tilt when placing pallets high onto racking. That's why Accu-Tilt displays the fork level at all times to prevent damage and increase productivity by eliminating the guess work.

Additionally, the Accu-Tilt's fork tilt level indicator also specifies the correct fork angle to use when moving a load and when parking the lift truck. This valuable device is easily installed on all makes and models of forklifts and lift trucks.

## HAND VACUUM CUPS MANUALLY OPERATED

Hand vacuum cups are designed to handle smooth, nonporous loads such as metal, glass, plastic etc. more effectively and more efficiently. These cups make the task of lifting much easier by allowing less awkward lift points and eliminating pinched fingers. Very easy to use - the lever grip is squeezed together when the cam levers are flipped into position and then rubber pads are securely clamped to surface by vacuum. Just flip back lever(s) to release.

# HAND WINCHES

## HEAVY-DUTY

Seven rugged sizes designed for heavy-duty use with line pulls from 550 lbs. to 11000 lbs. Models **LB298**, **LB299** and **LB300** are equipped with 2-speed gearing for ease in handling heavy loads. Hand cranks are removable under load to prevent tampering when oad operator is not present. Automatic brake prevents recoil and holds load safely in any position. Options available with a centre flange and chain operated.

## HEAVY-DUTY ALUMINUM

Compact all cast aluminum construction that makes it lightweight, but rugged for heavy-duty applications. Cranks are removable under load to prevent tampering when load operator is not present. Fully enclosed gears provide maximum safety. Automatic brake prevents recoil and holds load safely in any position.

## HEAVY-DUTY ENCLOSED WORM SHAFT

Enclosed worm shaft and worm wheel are immersed in an oil bath, providing constant lubrication and protection from corrosion. Maintenance is reduced while life expectancy is increased. # ALUMINUM DOCKPLATES

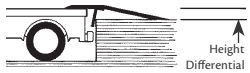
Skid resistant safety tread deck. Bevelled edges allow smooth access from either end. Bend at upper end permits both ends of plate to lie flat. Steel legs fit between dock and truck; prevent movement when in use.
High tensile aluminum alloy construction; no welds to break.

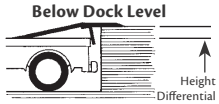
**HOW TO ORDER:**

1. **Select dockplate width:** add 12" to width of equipment to be used on dockplate.
2. **Determine height differential:** (the vertical distance from dock floor to truck floor) The height differential decides the necessary plate length.
3. **Select the necessary capacity.**

**Above Dock Level**



**Below Dock Level**



## COMBINATION BOARDS

For a height differential exceeding 11", use a ramp in combination with dockplate. Each plate can be converted to an equivalent-size ramp. Call us with your requirements.

### OPTIONS: RAIL DOCKBOARDS

Fixed Spanlocks provide quick and safe access between dock and railcar, or between railcars. Sold in pairs.

**Model No. KH192 Price/Each $**

**Model No. KH191 Price/Each $**

### HOW TO ORDER:

1. Determine required capacity: 90% of gross weight for forklift trucks; 67% of gross weight for powered pallet trucks. Example: Wt. of Forklift + Wt. of Heaviest Load = Gross Weight x .90 = Required Capacity (5,500 lbs. + 10,000 lbs. = 15,500 x .90 = 13,500 lbs.)
2. Select dockboard width: add 12" to width of equipment to be used on dockboard.
3. Determine height differential (the vertical distance from dock floor to truck floor).

# ALUMINUM WHEEL RISERS

Ideal for use when the loading dock is higher than the trailer bed. Levels out trailerwith dock; facilitates loading and unloading. 24" wide. 25 000 lbs. capacity per pair.

# CASTER SELECTION GUIDE

**4 FUNDAMENTAL FACTORS TO CONSIDER**

### REQUIRED LOAD CAPACITY

This is the most important criterion for caster selection. Each caster should have the capacity to support one-third of the total load weight, because overloading, uneven floors and load distribution may place a heavier burden on one or more casters.

### MOBILITY NEEDS

The larger the wheel size (and swivel radius), the greater the mobility. The type of bearing selected will also improve mobility and reduce rolling resistance. Neoprene, elastomeric, and urethane wheels offer maximum mobility.

### FLOOR CONDITIONS

What are your floors like? Check for rough or uneven surfaces–joints, grates, potholes–and for oil, grease and solvents or a variety of other chemicals or contaminants. In addition, note any carpeted areas or areas where non-marking qualities are critical.

### ENVIRONMENTAL CONDITIONS

Check for dust, humidity and temperature extremes. Are the floors littered with debris? Casters with sealed swivels are ideal in areas with sprays or wash-down requirements where there is lint or dust and where extreme quiet is essential.

## WHEEL TYPES

**Soft Rubber:** Offers a smooth, semi-cushioned ride with good floor protection, but can leave black marks on floors. Wears on rough surfaces and can become brittle if left exposed to the elements. Standard colour is black.

**Hard Rubber:** Economical, easy rolling and durable wheel with adequate impact strength, hard rubber can hold more weight than soft rubber and doesn't mark the floor as easily.

**Mold-On Rubber:** Offers a semi-cushioned ride, rolls over debris and on uneven surfaces. Tread is soft black rubber that can mark. Performs well on lighter applications but doesn't handle overloading very well.

**Pneumatic:** Have an outer tire with an inflatable tube, mounted to a metal rim assembly. The inflatable tire offers an exceptional cushioned ride, is light weight and has a great diversity of applications. Limited weight capacity, punctures and marking rubber are disadvantages to consider.

**Semi-Pneumatic:** Natural black rubber tread on a polyolefin/plastic hub and come standard with ball bearings. These wheels are used in many of the same applications as the full pneumatic wheels, but have the advantage of not going flat.

**Polyurethane:** Non-marking, popular, lightweight, durable and versatile wheel. Long-lasting tread mechanically bonded to an aluminum core, wears well and are impervious to water (including salt water), resistant to oils, grease, most solvents and chemicals, typically used in commercial, industrial, institutional and food service applications. Offers excellent manoeuvrability, semi-quiet ride, adequate floor protection and good capacity ratings.

**Polyolefin:** Very durable, inexpensive, holds high capacities, has high shock load impact strength, is sanitary and is impervious to water, resistant to most oils, grease, chemicals and solvents, is non-marking and most of our polyolefin wheels have a slight crowned tread, which offers good roll ability. Great for most applications not needing a cushioned ride and that will not be exposed to heat.

**Phenolic:** A very hard, durable and versatile wheel. Of all of the hard surface wheels (compared to steel) it provides the best floor protection and is quieter. Good roll ability and are very popular wheels in the industrial, manufacturing, warehousing and bakery industries. Resists oils, grease, gasoline, and most commonly used chemicals and intermittent water exposure. Not recommended for continuous wet applications.

**Hi-Temp "Lava" Nylon:** Will not crush under heavy loads. It is good for use on all sorts of surfaces from wood to concrete. Will tolerate temperatures from -43°C (-45°F) to 246°C (475°F) and is not affected by most corrosive chemicals.

## ROTARY LOBE PUMPS OVERVIEW

Lobe pumps are popular in diverse industries because they offer superb sanitary qualities, high efficiency, reliability, corrosion resistance and good clean-in-place and sterilize-in-place characteristics.

Rotary lobe pumps are non-contacting and have large pumping chambers. If wetted, they offer self-priming performance. A gentle pumping action minimizes product degradation. They also offer reversible flows and can operate dry for long periods of time.

**Advantages:**
- Pass medium solids
- No metal-to-metal contact
- Superior CIP/SIP capabilities
- Long term dry run (with lubrication to seals)
- Non-pulsating discharge

**Wetted components:**
Aluminum, Buna-N, cast iron, chrome plated, polypropylene, steel and zinc.

## ROTARY TYPE DRUM PUMPS

**ROTARY VANE PUMPS OVERVIEW**

While vane pumps can handle moderate viscosity liquids, they excel at handling low viscosity liquids such as LP gas (propane), ammonia, solvents, alcohol, fuel oils, gasoline and refrigerants. Vane pumps have no internal metal-to-metal contact and self-compensate for wear, enabling them to maintain peak performance on these non-lubricating liquids. Vane pumps are noted for their dry priming, ease of maintenance, and good suction characteristics over the life of the pump.

**Advantages**

## PUSH BROOM DEGREES OF SWEEP

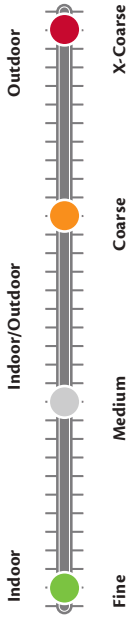
Push brooms are available in fine, medium, coarse, and extra-coarse. The scale is directly proportional to the size of dirt and the strength of the broom's fibres.

**Fine sweeping:** For sweeping dust and dirt on smooth indoor surfaces such as polished hardwood and vinyl. Fine fibres are flagged on the ends to increase softness and dust attraction when the broom glides across smooth hard indoor surfaces.

**Medium sweeping:** For indoors and outdoors on less smooth surfaces such as terrazzo, sealed or unsealed concrete. Medium fibres are used when a multi-purpose neutral sweeping action is required. When used outdoors, the broom works best on even surfaces with smaller debris.

**Coarse sweeping:** For heavier outdoor dirt and debris on uneven surfaces such as asphalt and concrete. These brooms offer a good compromise between surface drag and the ability to sweep larger sized material.

**X-coarse sweeping:** For outdoors on rough, uneven surfaces such as sweeping and pushing debris on streets or using in a landscaping application. These brooms have the most surface drag so they are harder to push, but move the largest size and amount of material possible.



## SAFETY ORANGE PUSH BROOMS

- Fine and medium sweep brooms are used for sweeping dust and debris on smooth indoor surfaces such as warehouse floors
- Use coarse sweep brooms to move heavier debris on outdoor surfaces
- Bolt-on handle (**JB655**) and brace (**JB783**) sold separately; braces are recommended on push brooms 24" and over
- Brooms are pre-drilled for easy installation of brace and bolt-on handle
- Fibre colour is orange for high visibility in warehouses or road crews in construction applications

# VERSAFLO™ TR-300 POWERED AIR PURIFYING RESPIRATORS (PAPR)

- Significantly smaller and lighter than existing 3M™ belt-mounted PAPR's
- Weight is kept close to the users back, reducing the leverage effect that can cause PAPRs to feel heavier
- Slim profile is designed for use in tight spaces
- Simple, 1-button operation
- Two types of alarms – one audible and one LED – alert the user to either a low battery or low airflow
- Battery and filter can be changed quickly and easily by hand
- Smooth surfaces are less prone to snagging on objects, and facilitate fast wipe downs for easy cleaning
- Air inlet design helps make sitting possible without compromising air intake
- Window on the filter cover allows easy identification of the type of filter installed
- Lightweight lithium ion battery charges quickly and has no memory effect or heavy metals
- LED lights on the battery indicate its charge status both on and of the charger

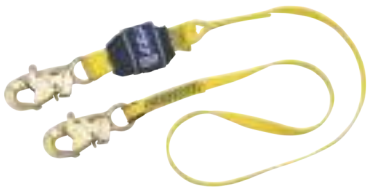
## THE ABC'S OF FALL PROTECTION

A typical Person Fall Arrest System (PFAS) incorporates three components, often described as the ABC's of fall protection. The anchorage connector, body support, and connecting device, when used together, form a complete system for maximum worker protection. But don't forget about another required component of any fall protection program – descent, rescue, and retrieval of a fallen worker.

3M | DBI SALA PROTECTA Fall Protection

**A**nchorages are a secure point of attachment. They must be able to hold fast under more than a ton of force generated in a fall.

**B**ody support harnesses distribute fall forces over the upper thighs, pelvis, chest, and shoulders. They provide a connection point on the worker for the PFAS.



**C**onnectors such as shock absorbing lanyards or self retracting lifelines connect a workers harness to the anchorage.

**D**escent and rescue devices are used to retrieve an injured worker or lower him to the ground.

## FULL BODY HARNESS APPLICATIONS

**CSA STANDARD Z259.10 DIVIDES HARNESSES INTO 5 CLASSES:**

### CLASS A

**PERSONAL FALL ARREST**

Class A full body harnesses are designed to support the body during and after the arrest of a fall.

### CLASS D

**SUSPENSION AND CONTROLLED DESCENT**

Class D full body harnesses are designed for suspension or controlled descent from a height.

### CLASS E

**LIMITED ACCESS (EVACUATION)**

Class E full body harnesses are designed to support a worker in a position that reduces the worker's profile during passage through a limited access area.

### CLASS L (LADDER)

**LADDER CLIMBING**

Class L full body harnesses are designed for use with fall restrict systems involving the use of a fall arrester that travels on a vertical lifeline or rail.

### CLASS P

**WORK POSITIONING**

Class P full body harnesses are designed to position a worker during a work operation.
