

BEGINNING TO FEEL THAT CHILL IN THE AIR?

Cooler weather means it's time to sharpen your skates, change to snow tires... and most importantly? Make sure your loading dock is winter-ready.

Properly maintained seals on your docks and doors* keep your warehouse temperature stable, which means big savings on your energy bill. But when it comes to the benefits of well-maintained doors*, energy savings are only the beginning:

Dock safety

proper door seals* keep out wet weather that could make your dock area slippery and hazardous.

Warehouse cleanliness

door seals* keep out dust and dirt—and keep out any small animals looking to warm up.

Asset preservation

proper dock bumpers prevent concrete damage to dock and walls, saving you money long-term.

Appearance

new door seals* promote a clean, successful business image, helping you make more money while saving on bills.

Don't overlook your loading dock. Take care of your docks and doors* — and they'll take care of your bottom line.

Want more information on how you can maintain your dock? Reach out to one of our dock specialists today.

*Excludes Quebec.
